CAUTION

- The AC power supply for the X-91 on the rear panel outputs 16 V AC. Therefore, it cannot be used for supplying AC power to the X Series.
- In addition to conventional audio circuitry, this unit is equipped with 4 video input systems and 2 video output systems.

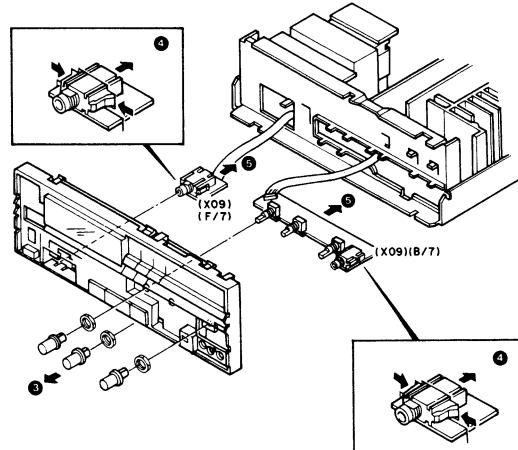

DISASSEMBLY FOR REPAIR

(Remove the case before proceeding to the following.)

1. Remove the 5 screws holding the front panel to the upper and lower sides, and then take out the front panel in the direction of the arrow (1).
2. Disengage the lugs (upper side: 3, lower side: 2) holding the panel escutcheon to the sub-panel, and then draw the panel escutcheon toward the front (2).

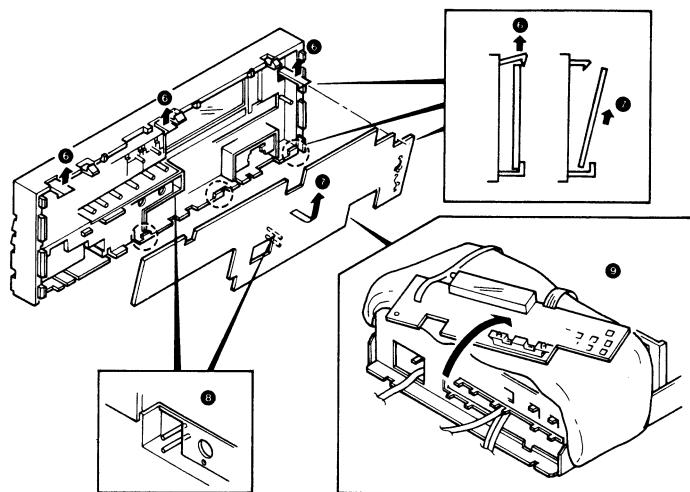

3. Remove the BASS, TREBLE and MIC MIXING knobs and their hex nuts from the panel escutcheon (3).
4. Disengage the lugs holding the PHONES and MIC jacks to the panel escutcheon as shown in the illustration (4).
5. Remove the Audio Unit (X09-2500-11) (B/7) and (F/7) PC boards in the direction of the arrow (5).

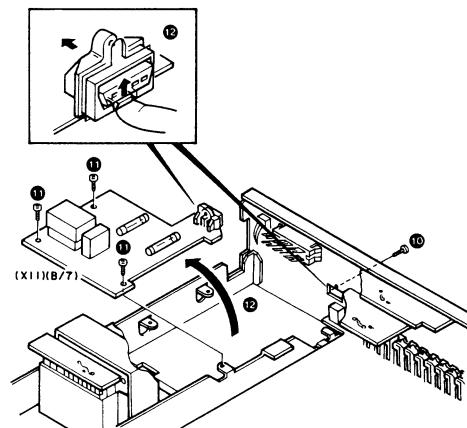

DISASSEMBLY FOR REPAIR

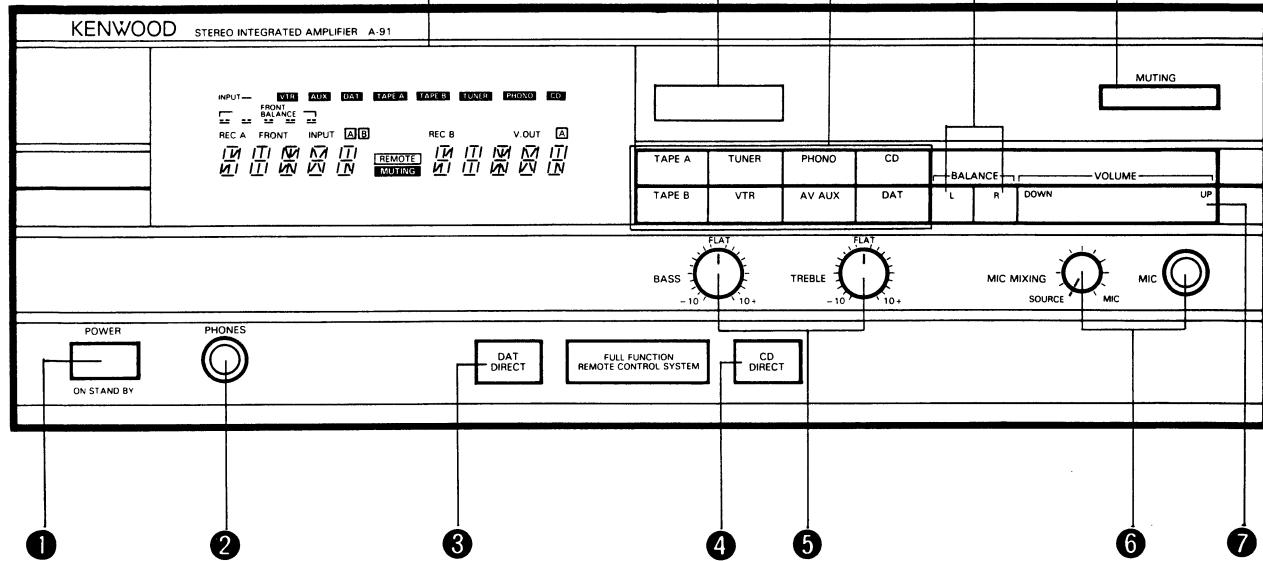

6. Disengage the 3 lugs holding the Control Unit (X11-2440-11) (A/7) to the panel escutcheon (⑥).
7. Paying attention to the 3 lugs on the bottom side of the panel escutcheon, remove the Control Unit (X11-) (A/7) in the direction of the arrow (⑦).
8. When attaching the Control Unit (X11-) (A/7) to the panel escutcheon, make sure that the 2 pins of the Control Unit fit into the holes on the panel escutcheon (⑧).
9. Spread a cloth over the set, and then place the Control Unit (X11-) (A/7) on it, as shown in the illustration (⑨).

10. Remove the screw holding the rectangular receptacle (Power supply) to the rear panel (⑩).
11. Remove the 3 screws holding the Control Unit (X11-) (B/7) to the frame and chassis (⑪).
12. Disengage the claws of the rectangular receptacle (Power supply), and the remove the Control Unit (X11-) (B/7) in the direction of the arrow (⑫). When attaching the Control Unit (X11-) (B/7) to the rear panel, pay attention to the position of the rectangular receptacle (Power supply).

FUNCTION OF AMPLIFIER

**① POWER switch**

Press this switch to turn power to the entire system ON. Press it again to set it in STAND BY mode.

This switch functions in the same way as the POWER switch on the tuner.

② PHONES jack

Connect stereo headphones to this jack to listen in private. Sound from the speakers will automatically be cut-off.

Note:

Be sure to lower the volume level before plugging or unplugging the headphones.

③ DAT DIRECT switch

When this switch is set to ON (the indicator lights up), the signal input to the DAT jacks is selected over the other input signals. This allows you to listen to high quality digital sound from a DAT (Digital Audio Tape).

With this switch ON, no controls, except for VOLUME and MUTING on the amplifier front panel, function. To release DAT direct mode, press this switch again to set it to OFF, or select the desired source with the Input Selector switches (other than the DAT switch).

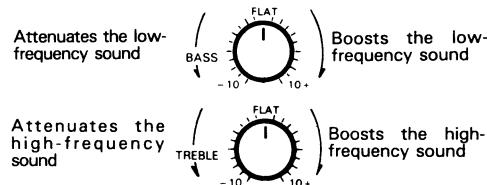

④ CD DIRECT switch

When the DP-710 CD player is connected using the system control cord and the CD input selector switch is selected, pressing the CD DIRECT switch allows to play the DP-710 CD player.

When this switch is set to ON (the indicator lights up), the signal input to the CD jacks is selected over the other input signals. This allows you to listen to high quality digital sound from a Compact Disc. With this switch ON, no controls except for VOLUME and MUTING on the amplifier front panel, function. To release CD direct mode, press this switch again to set it to OFF, or select the desired source with the Input Selector switches (other than the CD switch).

⑤ BASS/TREBLE controls

Adjust the acoustic characteristics of the listening room or compensate for speaker response.

**⑥ MIC jack and MIC MIXING control**

Connect a monaural microphone to the MIC jack.

The signal from the microphone is decreased while the source signal is increased.

The signal from the microphone is increased while the source signal is decreased.

When the microphone is not in use, be sure to set the MIC MIXING control to its SOURCE position and unplug the microphone. When plugging or unplugging a microphone, set the MIC MIXING knob to the SOURCE position, and lower the volume level with the VOLUME key.

⑦ VOLUME control key

This key is used to adjust the volume level of both the speakers and headphones. Be sure to lower the volume level before turning the power OFF.

When muting is activated, pressing the VOLUME key will automatically release the muting function.

Note:

When power resumes after an interruption, or power cord disconnection, the volume level is automatically set to the lowest level.

⑧ MUTING key

When this key is pressed, the volume level is instantaneously attenuated. Pressing it again will resume the previous volume level.

FUNCTION OF AMPLIFIER

⑨ BALANCE control key

Adjust the balance between the left and right channels. Press the left side (L) to lower the right-channel sound and press the right side (R) to lower the left-channel sound.

⑩ Input selector switches

- TAPE B:** Press this to play the B cassette deck.
- VTR (VCR):** Press this to listen to sound from a VCR.
- AV AUX:** Press this to play the program source connected to the rear panel AV AUX jacks.
- DAT:** Press this to play the DAT deck.
- CD:** Press this to play the CD player.
- PHONO:** Press this to play the turntable.
- TUNER:** Press this to listen to broadcasts.
- TAPE A:** Press this to play the A cassette deck.

Notes:

1. These input selector switches permit the selection of the input source and either TAPE A or TAPE B recording mode at the same time. Before recording, check that the display indicator indicates the required input source.
2. When recording sound onto a video or DAT recorder, first press the AV AUX switch, then press the input selector switch of the required source.

⑪ Remote sensor (remote control signal receptor)

⑫ Display window

① INPUT display (VTR, AUX, DAT, TAPE A, TAPE B, TUNER, PHONO, CD)

Shows the source selected by the Input Selector switches.

② FRONT BALANCE indicator

Shows the volume balance between the left (L) and right (R) speakers.

③ REC A indicator

Lights when recording with the A cassette deck.

④ FRONT indicator

Lights when adjusting the volume level output to the speakers.

⑤ INPUT indicator

Lights when the display indicator is set to input mode.

⑥ [A], [B] indicator

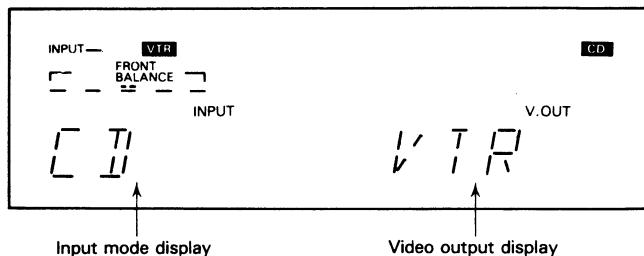

The A indicator lights when the A cassette deck is operated, and the B indicator lights when the B deck is operated.

⑦ Display

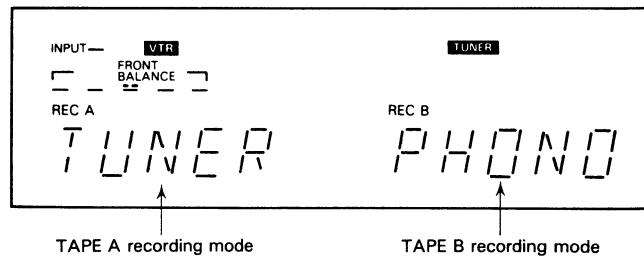

The following three types of display functions are available:

1. Normal display mode
2. Rec out display mode
3. Volume level display mode

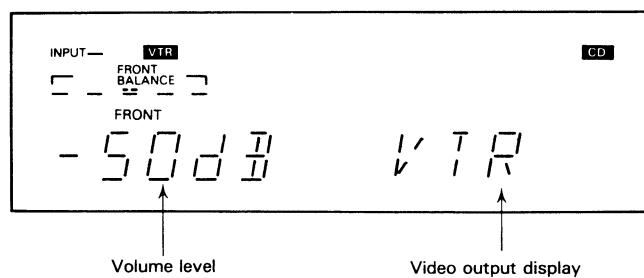

⑴ Normal display mode

⑵ Rec Out display mode

⑶ Volume display mode

⑧ REMOTE indicator

Blinks when the remote control unit is operated.

⑨ MUTING indicator

Blinks when the MUTING button is engaged.

⑩ REC B indicator

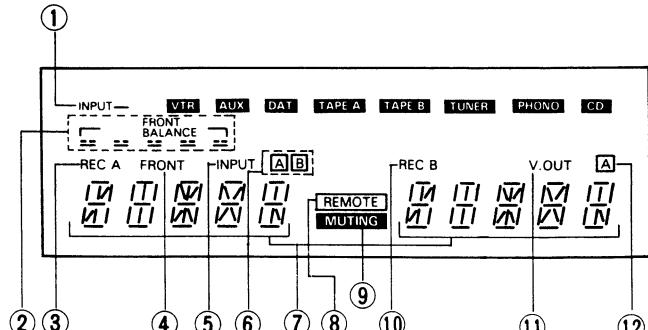

Lights when recording with the B cassette deck.

⑪ V.OUT indicator

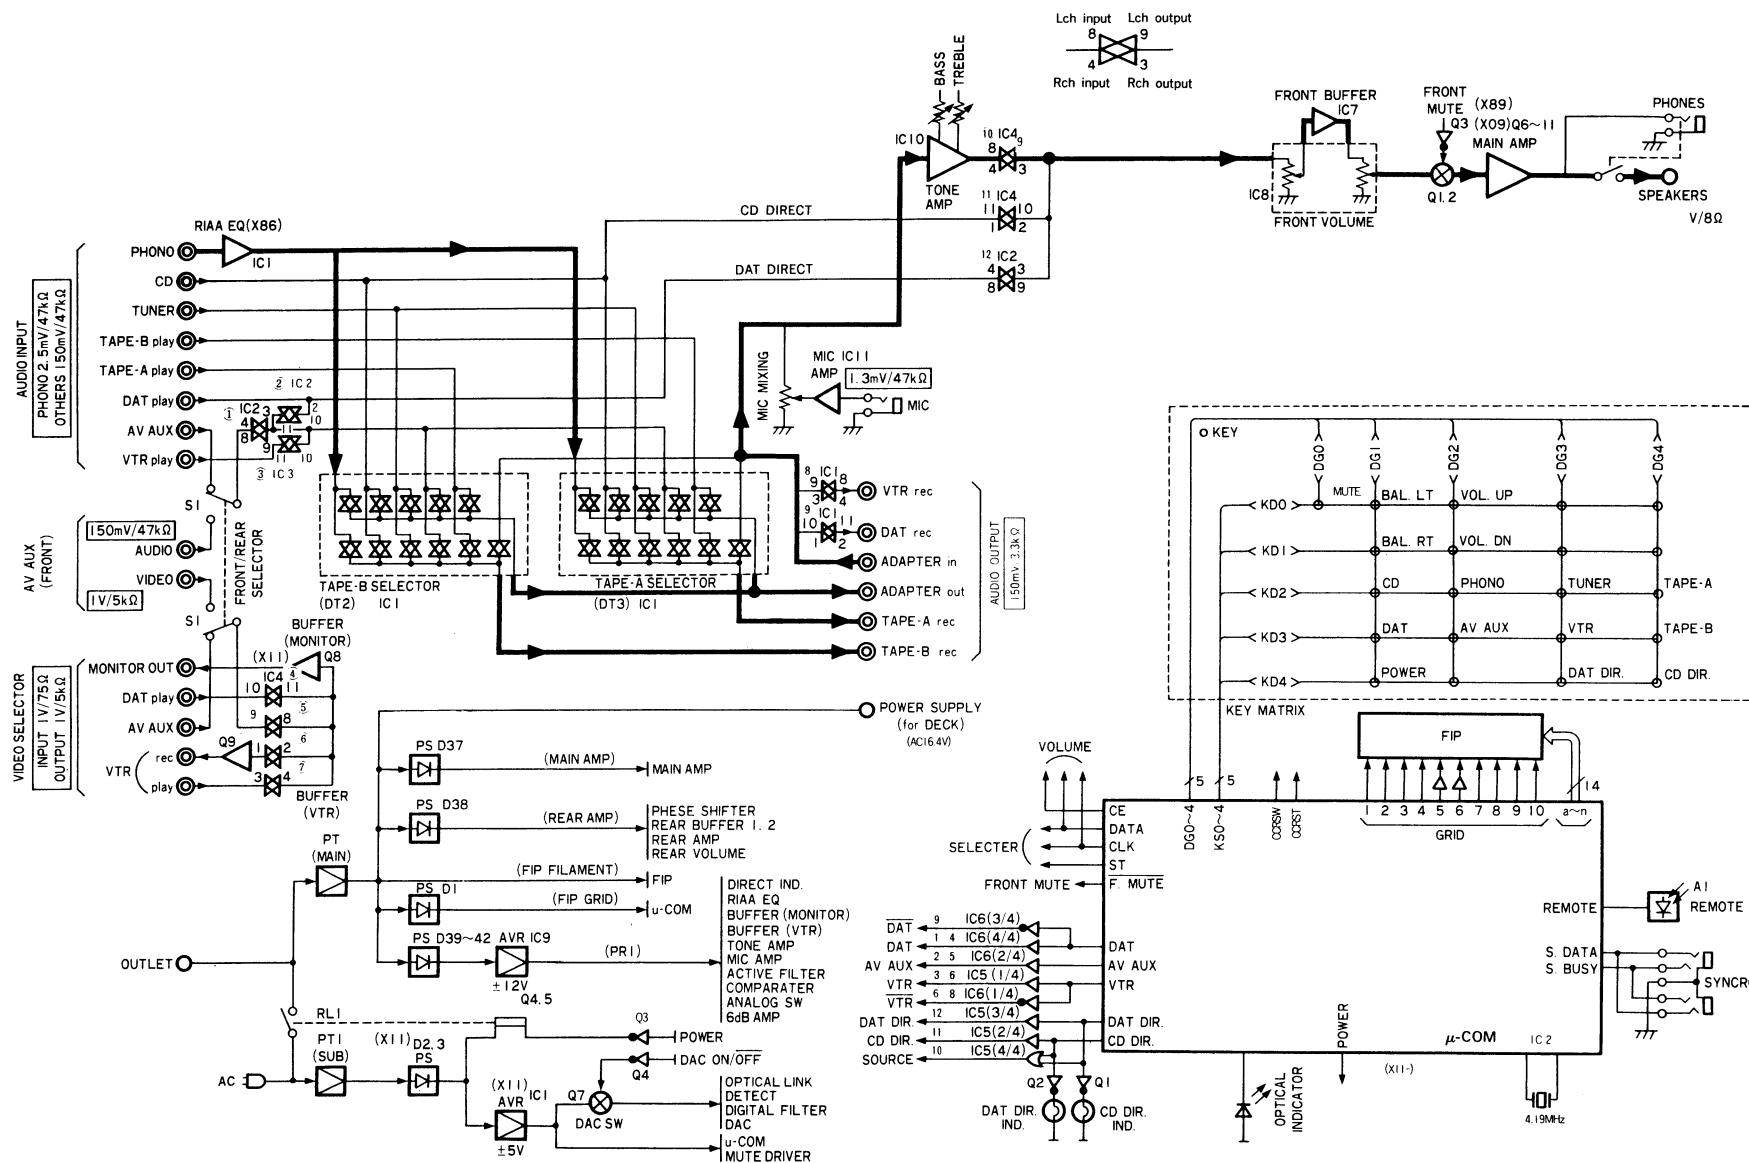

Lights when the display indicator is set to visual mode.

⑫ [A] indicator

Lights when dubbing (manual dabbing) from the A deck to the B deck.

BLOCK LEVEL DIAGRAM

CIRCUIT DESCRIPTION

Description of Components

AUDIO UNIT (X09-2500-11)

Component	Use/Function	Operation/Condition/Interchangeability
IC1(LC4066BH)	Selector	VTR and DAT REC switching.
IC2(LC4066BH)	Selector	AUX and DAT switching.
IC3(LC4066BH)	Selector	DAT-D and VTR switching.
IC4(LC4066BH)	Selector	CD-D and SOURCE switching.
IC5(UPC339C)	Comparator	Pin No. 9 "H" and No. 14 "H": VTR control. Pin No. 7 "H" and No. 1 "H": CD-D. Pin No. 11 "H" and No. 13 "H": DAT-D. Pin No. 4 "H" and No. 2 "L": SOURCE.
IC6(UPC339C)	Comparator	Pin No. 10 "H" and No. 13 "L": <u>VTR</u> . Pin No. 5 "H" and No. 2 "H": AUX. Pin No. 8 "H" and No. 14 "L": DAT. Pin No. 7 "H" and No. 1 "H": DAT.
IC7(UPC4570C)	Buffer	Buffer for Electronic VR. (IC8).
IC8(LC7535)	Electronic VR	Variation of REC OUT signal level, from 0 to 7 dB.
IC9(UPC78M12H)	Constant-voltage supply	3-pin regulator, for +12 V constant voltage.
IC10(UPC4570C)	Tone amplifier	Output configuration.
IC11(AN6556)	Microphone amplifier	
Q1, 2	Muting	
Q3	Muting driver	ON and OFF of Q1 and Q2.
Q4, 5	Constant-voltage supply	For -12 V.
Q6, 7	Final Tr	
Q8, 9	Final Tr	
Q10, 11	Bias current compensation	

CONTROL UNIT (X11-2440-11)

Component	Use/Function	Operation/Condition/Interchangeability	
IC1(UPC78M05H)	3-pin regulator, for +5 V supply to digital circuitry	IC from any maker can be used if it is a 78M05.	
IC2(CXP5014-211S)	Microprocessor	Refer to page xx.	
IC3(M51951ASL)	System reset	A high reset signal is output every time the power plug is connected or disconnected.	
IC4(LC4066BH)	Video electronic VR	LC4906 is also usable.	
Q1	CD-DIRECT lamp driver	ON in CD DIRECT mode.	Interchangeability: 2SC3246
Q2	DAT DIRECT lamp driver	ON in DAT DIRECT mode.	Interchangeability: 2SC3246
Q3	Power relay drive	ON when power is turned ON.	Interchangeability: 2SC3246
Q5, 6	FL current booster		
Q8	Video buffer, for MONITOR OUT		No interchangeability.
Q9	Video buffer, for REC OUT		No interchangeability.

CIRCUIT DESCRIPTION

MAIN AMPLIFIER UNIT (X89-1010-03) <DT4>

Component	Use/Function	Operation/Condition/Interchangeability
Q1~4	Class A 1st-stage differential amplifier	
Q5~8	Class A 2nd-stage differential amplifier	
Q9, 10	Class A current Miller circuit	
Q11~14	Predriver	
Q15, 16	Current limiter	Limits the current of the final Tr in overloaded drive.
Q17		
Q18, 19		

PRE-AMPLIFIER UNIT (X85-1030-11) <DT1>

Component	Use/Function	Operation/Condition/Interchangeability
IC(AN6556)	Equalizer amplifier	

SUB-CIRCUIT UNIT (X13-5520-00) <DT2, 3>

Component	Use/Function	Operation/Condition/Interchangeability
IC1(CX7977)	Selector IC	Refer to page 20.

BUFFER UNIT (X13-5800-00) <DT5>

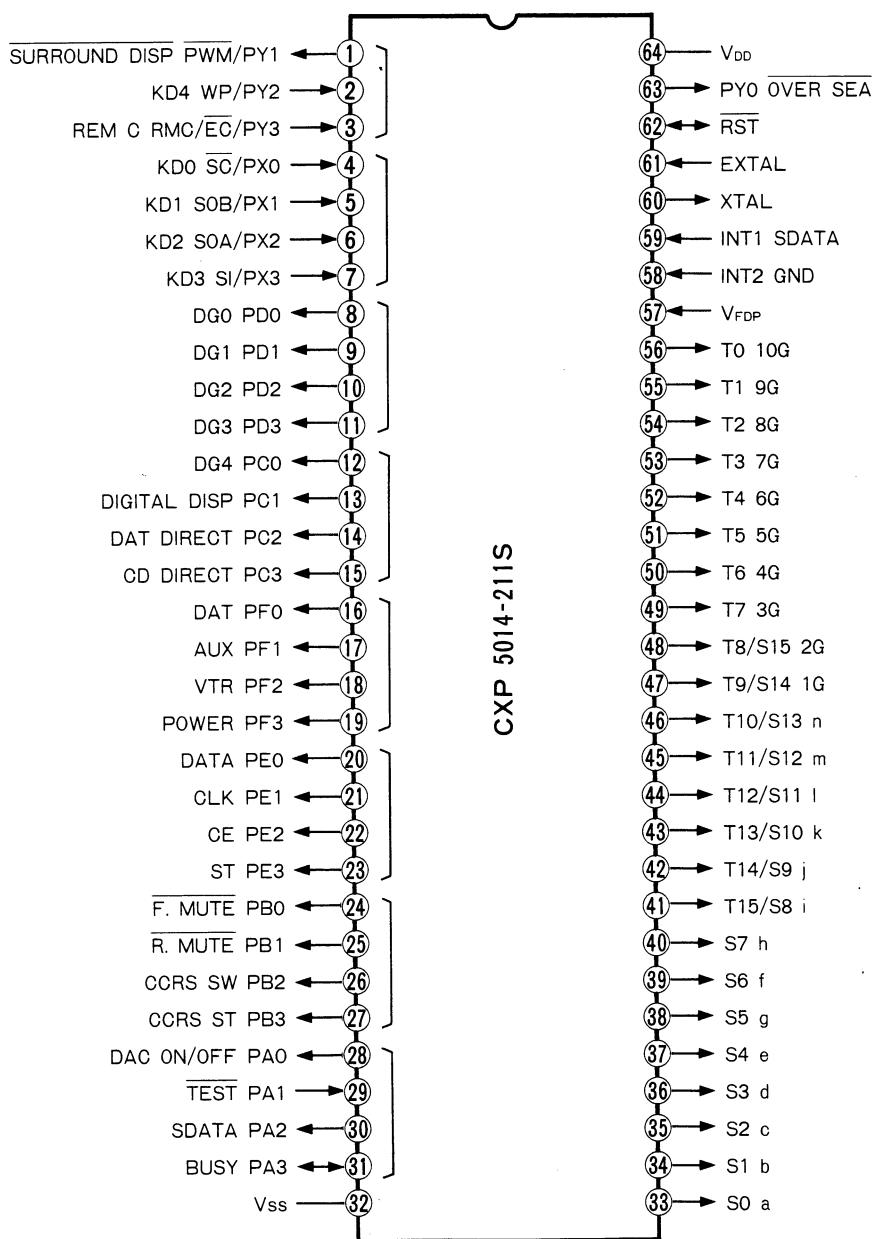

Component	Use/Function	Operation/Condition/Interchangeability
IC1(UPC4570C)	Buffer amplifier

Microprocessor IC

Pin Configuration Diagram

CIRCUIT DESCRIPTION

Block Diagram of the Microprocessor and Its Surroundings

CIRCUIT DESCRIPTION

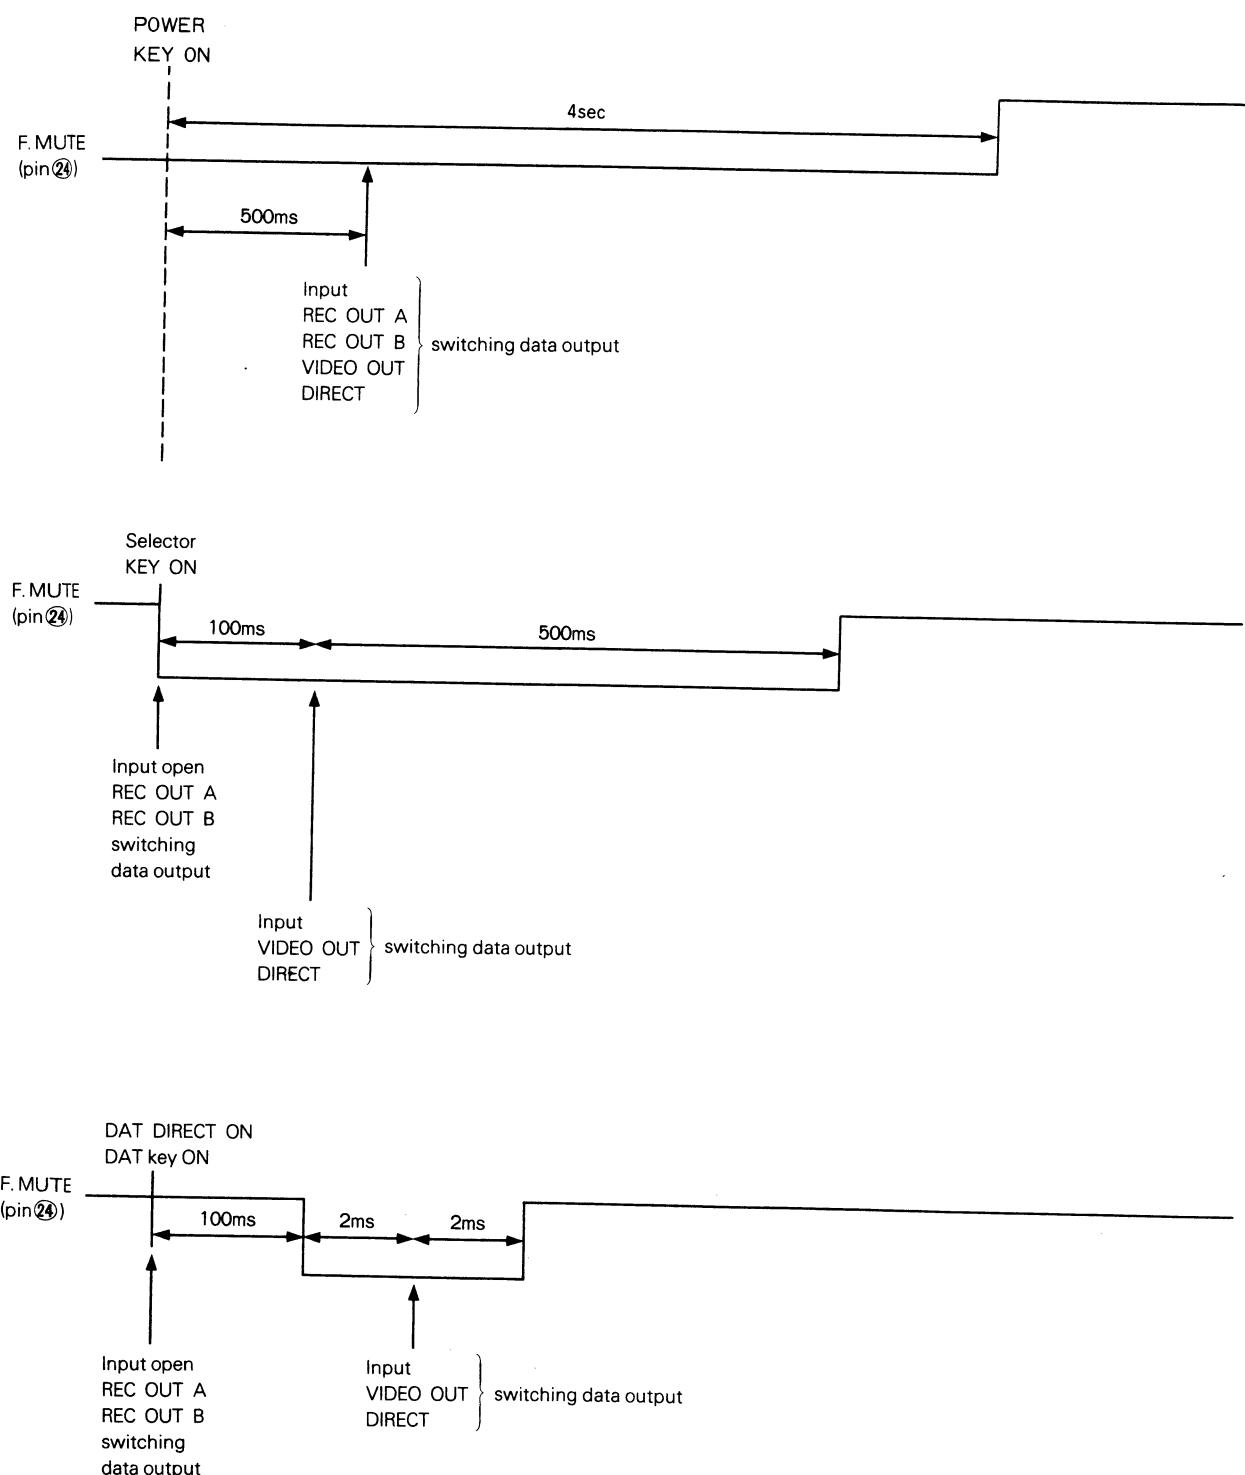

Explanation of Pins

Pin No.	Pin Name	Symbol	I/O	Function
1	PY1	SURROUND DISP	O	Surround display LED direct-drive port. Surround ON: L. Surround OFF: H.
2	PY2	KD4	I	Key scanning input ports.
4	PX0	KD0	I	Active H.
5	PX1	KD1	I	
6	PX2	KD2	I	
7	PX3	KD3	I	
3	RMC	REMC	I	Remote control input terminal.
8	PD0	DG0	O	Key scanning output ports.
9	PD1	DG1	O	Normally H, scanning is performed when a key is ON.
10	PD2	DG2	O	
11	PD3	DG3	O	
12	PD4	DG4	O	
13	PC1	DIGITAL DISP	O	Optical-communication indicator LED direct-drive port. LED ON: H, LED OFF: L. (Blinking at a 62.4 ms interval)
14	PC2	DAT DIRECT	O	DAT direct ON/OFF port. DAT DIRECT ON: H, DAT DIRECT OFF: L.
15	PC3	CD DIRECT	O	CD direct ON/OFF port. CD DIRECT ON: H, CD DIRECT OFF: L.
16	PF0	DAT	O	Video output select ports. DAT output: H.
17	PF1	AUX	O	AUX output: H.
18	PF2	VTR	O	VTR output: H.
19	PF3	POWER	O	POWER ON/OFF port. POWER ON: H, POWER OFF: L.
20	PE0	DATA	O	Serial data output port, for selector IC (CX7977) × 2 and electronic VR IC (LC7535) × 2.
21	PE1	CLK	O	Clock output port for serial data of the selector IC and electronic VR IC.
22	PE2	CE	O	CE output port for serial data of the electronic VR IC.
23	PE3	ST	O	ST output port for serial data of the selector IC.
24	PB0	F. MUTE	O	Front speaker muting port. Muting ON: L, muting OFF: H.
25	PB1	R. MUTE	O	Rear (Surround) speaker muting port. Muting ON: L, muting OFF: H.
26	PB2	CCRS SW	O	CCRS switch output port. H during CCRS and after setting CCRS.
27	PB3	CCRS ST	O	CCRS strobe output port. H during CCRS.
28	PA0	DAC ON/OFF	O	DAC ON/OFF output port. H with DAC ON.
29	PA1	TEST	I	Test & overseas mode setting input port.
30	PA2	SDATA	O	Inter-system serial data output port.
31	PA3	BUSY	I/O	Inter-system serial data BUSY input/output port.
32	Vss			Microprocessor ground.
33~46	S0~S13	a~n	O	FL tube segment outputs.
47~56	T9~T0	1G~10G	O	FL tube digit outputs.
57	VFDP			FL tube power supply terminal.
58	INT2			Not used (grounded).
59	INT1	SDATA	I	Inter-system serial data input port.
60	XTAL			Clock generator output terminal.
61	EXTAL			Clock generator input terminal.
62	RST			Reset signal input & built-in power-on reset circuit output terminal.
63	PY0	OVER SEA	O	Overseas mode setting output port.
64	VDD			Microprocessor positive power supply terminal.

Electronic VR Data Timing

CIRCUIT DESCRIPTION

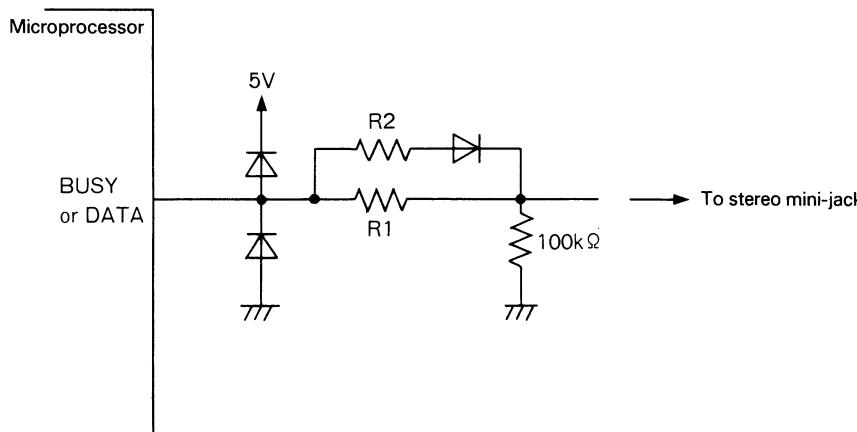

Explanation of Serial Data Communication

The accompanying chart shows the serial data communication format, which uses a 2-wire bidirectional bus system of BUSY and DATA. Each word is composed of 8 bits, with the first 4 bits representing the transmitter model code (in this example, 4 = CD player) and the last 4 bits the data code (in this example, 8 = PLAY (48H)). In the DATA signal, the first H period lasting 10 ms indicates the start of the serial data. The data is determined by the L

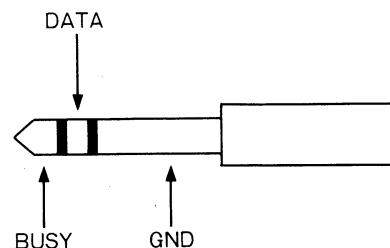

length, i.e. 0 for 5 ms and 1 for 10 ms. The 5 ms H periods indicate data sections. BUSY rises at the same time as, or before, the start of DATA, and goes L at the same time as or after, the end of DATA. BUSY is provided to prevent the collision of data outputs from different units, and thus the output of serial data can be started only when BUSY is L. If BUSY is H, data is output after BUSY becomes L.

Explanation of Serial Communication Interface

Both BUSY and DATA are transferred using the interface circuit shown in the diagram. (However, when the micro-

processor uses C MOS outputs, the R1 and R2 constants vary depending on the microprocessor.)

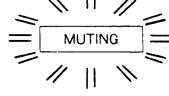

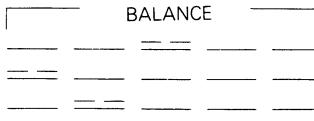

BUSY and DATA are connected using a stereo mini-plug as shown in the diagram. The GND connection is obtained

from the amplifier, and other units are grounded via a capacitor.

CIRCUIT DESCRIPTION

Explanation of Keys

Key Name	Function	Display
Selector CD	<ul style="list-style-type: none"> Switches the input selector to CD. Sets REC OUT A to CD, unless Deck A is being used for recording. Sets REC OUT B to CD, unless Deck B is being used for recording. 	<p>INPUT  V. OUT No change.</p> <p>If Deck A is used for recording, the display shows the above for only 3 seconds, after which it shows the following. REC A </p>
Selector PHONO TUNER TAPE A TAPE B	Same operation as CD above.	
Selector PHONO TUNER TAPE A TAPE B	Same operation as CD above.	
Selector DAT	<ul style="list-style-type: none"> Switches the input selector to DAT. Switches the video output (V. OUT) to DAT. Sets REC OUT A to DAT, unless Deck A is being used for recording. Sets REC OUT B to DAT, unless Deck B is being used for recording. <p>The DAT key is not accepted while the deck is recording the audio portion of another audio/visual source.</p>	<p>INPUT  V. OUT </p> <p>If Deck A is used for recording, the display shows the above for only 3 seconds, after which it shows the following. REC A  REC B </p> <p>If Deck B is used for recording, the display shows the above for only 3 seconds, after which it shows the following.</p>
Selector AUX VTR	Same operation as DAT above.	
MUTE	This is the muting key. Pressing it once activates muting and pressing it again releases muting. Muting is also released when a VOLUME key is pressed.	 <p>The indicator flashes during muting.</p>
CD DIRECT	<ul style="list-style-type: none"> Pressing this key once selects CD direct input, and pressing it again releases it. Direct input mode is also released by pressing a selector key other than CD. 	 <p>The indicator lights during CD direct input mode.</p>
DAT DIRECT	Same operation as CD DIRECT above.	 <p>The indicator lights during DAT direct input mode.</p>
VOLUME UP/DOWN	<ul style="list-style-type: none"> Each press of the VOLUME UP/DOWN key changes the speaker volume by 1 dB. Holding it depressed changes the volume every 64 ms (between 0 and -78 dB). 	 <p>The display shows the above for 3 seconds, then returns to the previous content.</p>
BALANCE L/R	<ul style="list-style-type: none"> Each press attenuates the speaker volume of the opposite channel by -2 dB in 10 steps. At the Leftmost or Rightmost setting, the volume of the opposite channel is attenuated to -79 dB. 	 <p>Center Leftmost Between center and leftmost position</p>
POWER	<ul style="list-style-type: none"> Pressing this key once turns power on, and pressing it again turns it off. This key must be pressed with an interval of at least 1 second. 	All displays and indicators go off when power is turned OFF.

CIRCUIT DESCRIPTION

Initial Status

Status	Explanation	Display
After connection to an Acc power outlet	<ul style="list-style-type: none"> The input selectors and both REC OUT A and B are set to TUNER. The video output (V. OUT) is set to VTR. CD DIRECT and DAT DIRECT are OFF. MUTING is OFF. Volume is set to -50 dB. Balance is set to the center. POWER is OFF. 	All displays and indicators are OFF when the power cord is connected to an Acc outlet.
After pressing the POWER key ON	<ul style="list-style-type: none"> The input selectors, video output, volume and balance, MUTING, CD DIRECT and DAT DIRECT their last status. REC OUT A and B are set to the same condition as the input selectors. 	<p>The display shows the above when POWER is turned ON after having connected the power cord to an Acc outlet.</p>

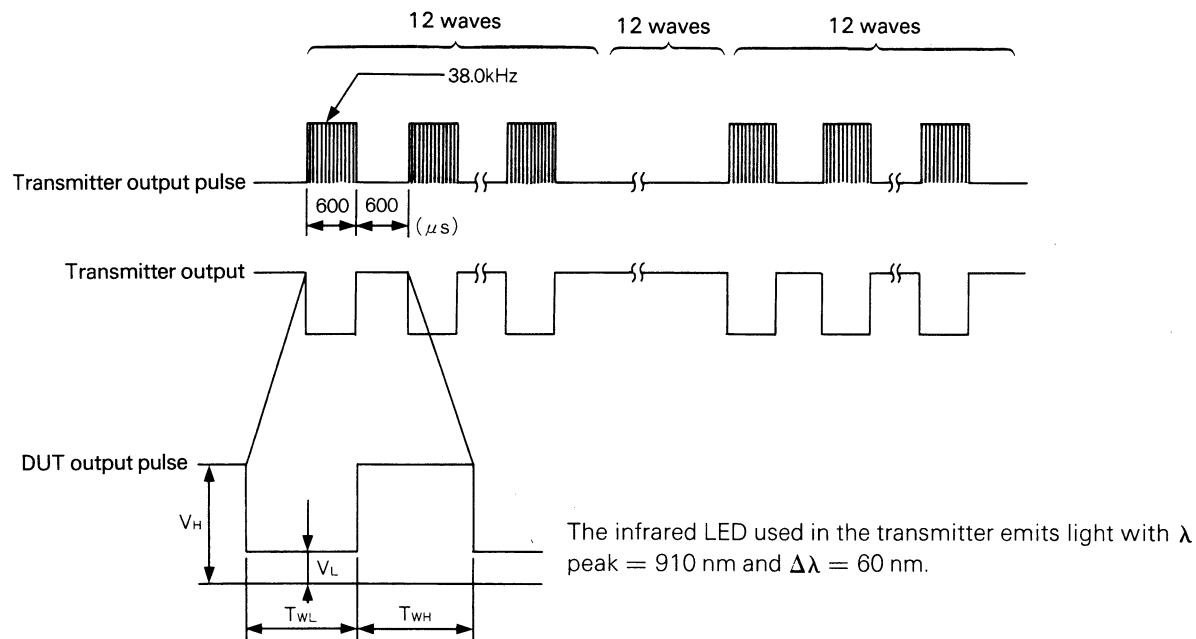

Test Mode

Status	Explanation	Display
Test mode start procedure	<ul style="list-style-type: none"> Connect the power cord to an Acc outlet while shortcircuiting the test pins. 	
Function of test mode	<ul style="list-style-type: none"> All display-tube segments are illuminated. The VOL UP/DOWN keys do not operate in ± 1 dB, step but between $-\infty \leftrightarrow -26$ dB $\leftrightarrow 0$ dB. The BAL L/R keys do not operate in -2 dB steps, but between L \leftrightarrow Center \leftrightarrow R. CCRS ST and CCRS SW ports go High. 	All FL tubes light.
Test mode finish procedure	<ul style="list-style-type: none"> Lighting of the display tubes and High status indicators of the CCRS ST and SW ports can be cleared by pressing the POWER key. The volume and balance variation steps can be cleared by disconnecting the power cord from the Acc outlet.

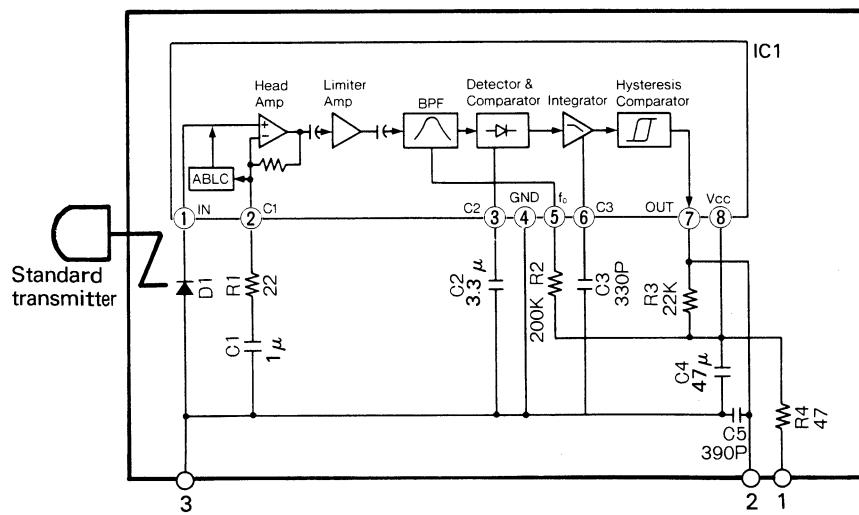

CIRCUIT DESCRIPTION

Explanation of Pins

Pin No.	Pin Name	I/O	Function
1	GND		Audio signal reference voltage (0 V).
2~7	I1(L)~I6(L)	I	L CH audio signal input terminals (6 inputs).
8~10	F3(L)~F1(L)	O	L CH audio signal output terminals (3 outputs).
11	CS	I	Chip Select terminal. The chip is selected when serial data bit (9) coincides with the level at the CS terminal. That is, when CS = bit (9). CS = Vss when the level is "0". CS = open or VDL when it is "1".
12	M/S	I	Serial data input mode switching terminal. The input is 8-bit when the M/S terminal is fixed at Vss, and is 11-bit when it is open or at VDL.
13	VDL		Logic circuitry power supply (Vss + 5 V).
14	Vss		IC board potential (-14 V).
15	Clock	I	Serial data input clock. The data is 11-bit or 8-bits, and is input at the rise of the clock.
16	Data	I	11-bit or 8-bit serial data.
17	Strobe	I	The serial data input in the analog switch status set pulse (1-bit) IC is latched at the rise of the Strobe pulse, turning ON the switch indicated by the data.
18	L Vref	I	Sets the control signal (Clock, Data and Strobe) input level.
19	VDD		Switch driver power (+14 V).
20~22	F1(R)~F3(R)	O	R CH audio signal output terminals (3 outputs).
23~28	I6(R)~I1(R)	I	R CH audio signal input terminals (6 inputs).

Control Data Configuration

CIRCUIT DESCRIPTION

IC8 (X09-2500-11): LC7535

Electronic VR IC

Equivalent Circuit Block Diagram

Explanation of Pins

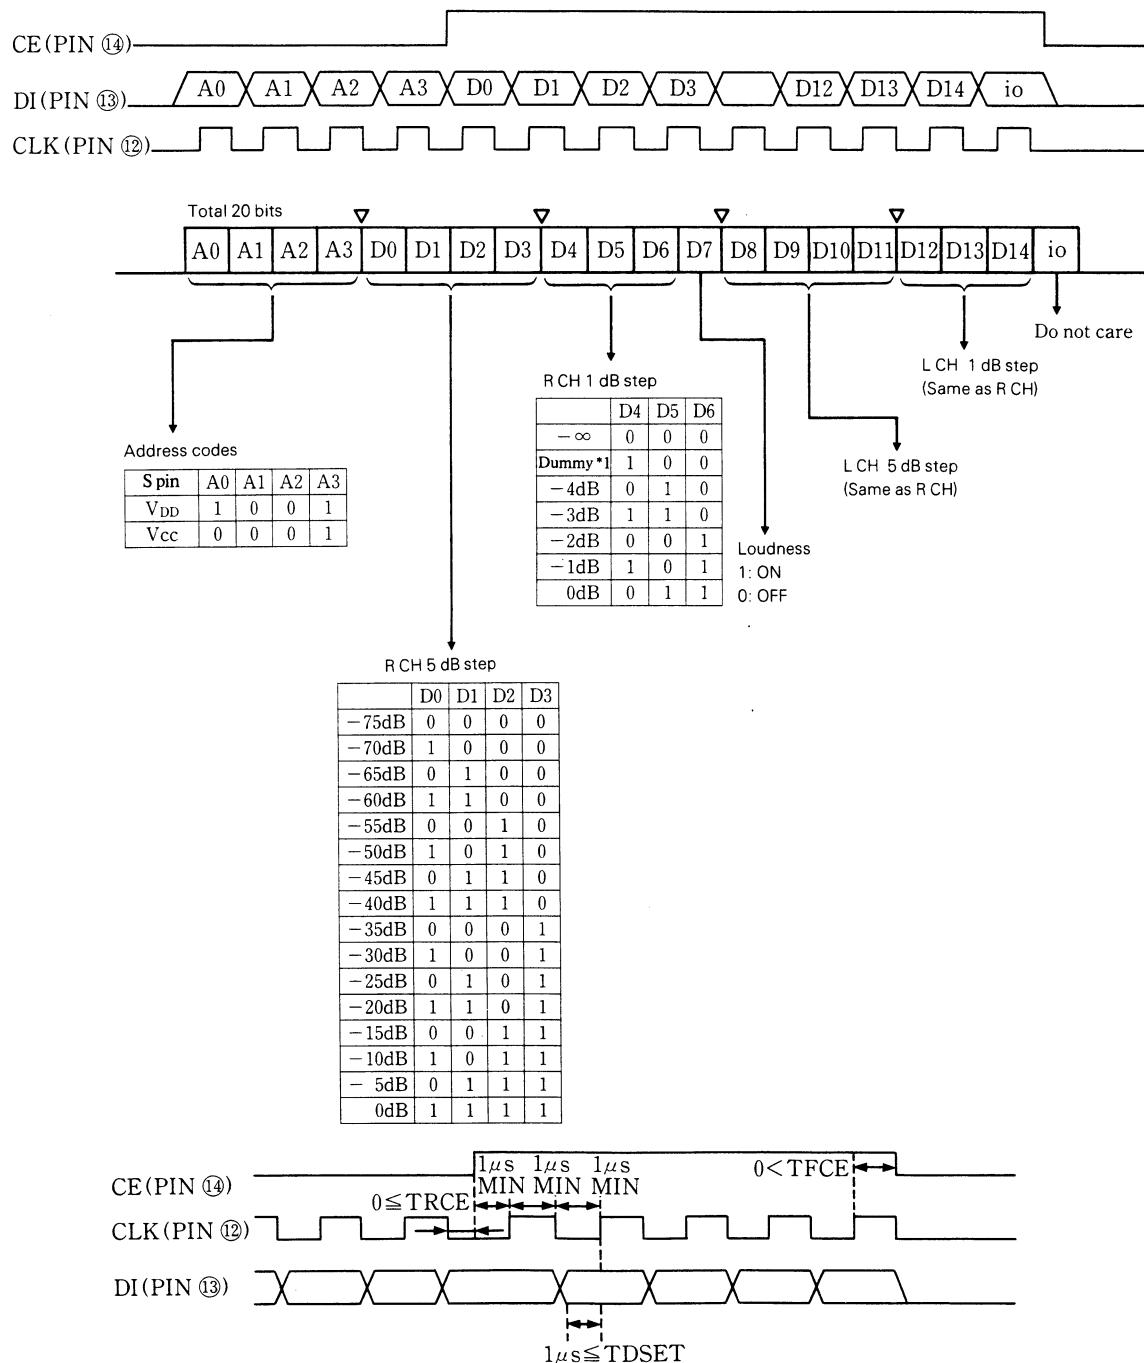

Pin. No.	Pin Name	I/O	Function	Remark
1	L5dB IN	I	5 dB step attenuator input terminals. Shall be driven with low impedance signal.	Total resistance of 75 kilohms
22	R5dB IN			
2	LCT 1			
3	LCT 2			
21	RCT 1			
20	RCT 2			
4	L5dB OUT	O	5 dB step attenuator output terminals. Each shall be connected to a load of around 1 megohm.	
19	R5dB OUT			
5	L1dB IN	I	1 dB step attenuator input terminals. Each shall be driven with a low impedance signal.	Total resistance of 20 kilohms.
18	R1dB IN			
6	L1dB OUT	O	1 dB step attenuator output terminals. Shall be connected to a load between 47 kilohms and 1 megohm.	
17	R1dB OUT			
7	L VM		Volume common terminals. The patterns connected to these terminals shall have as small an impedance as possible. As the L VM, R VM and Vss are not connected internally, they shall be connected externally according to the specifications. Specially, in the case of a single power supply, use care in determining the capacitance of the capacitor between VM and Vss, because it may become the residual resistance component when the volume is lowered.	
16	R VM			
9	S		Selects the address code in the data format. Data is accepted with address code "9" when this terminal is connected to VDD, and with address code "8" when it is connected to Vcc.	

CIRCUIT DESCRIPTION

Explanation of Pins

Pin No.	Pin Name	I/O	Function	Remark
12	CLK		Input terminals for controlling LC7535 with serial data.	
13	DI		Input with an amplitude from 0 to 5 V.	
14	CE		When the CLK, DI or CE of the controlled microprocessor goes High in the backup status ($V_{DD} = V_{CC} = 0$ V), insert a resistor of more than 2 kilohms in series with the signal line.	
8	V_{EE}			
10	V_{DD}		Power supply connection terminals. Be careful that V_{CC} does not rise before V_{DD} when power is turned ON.	
11	V_{SS}			
15	V_{CC}

LC4066BH

A top-down view of the LC7535 integrated circuit package. The package is a rectangular plastic or ceramic component with a grid of pins along its bottom edge. Four specific pins are labeled: pin 1 is at the bottom left, pin 11 is at the bottom right, pin 12 is at the top right, and pin 22 is at the top left.

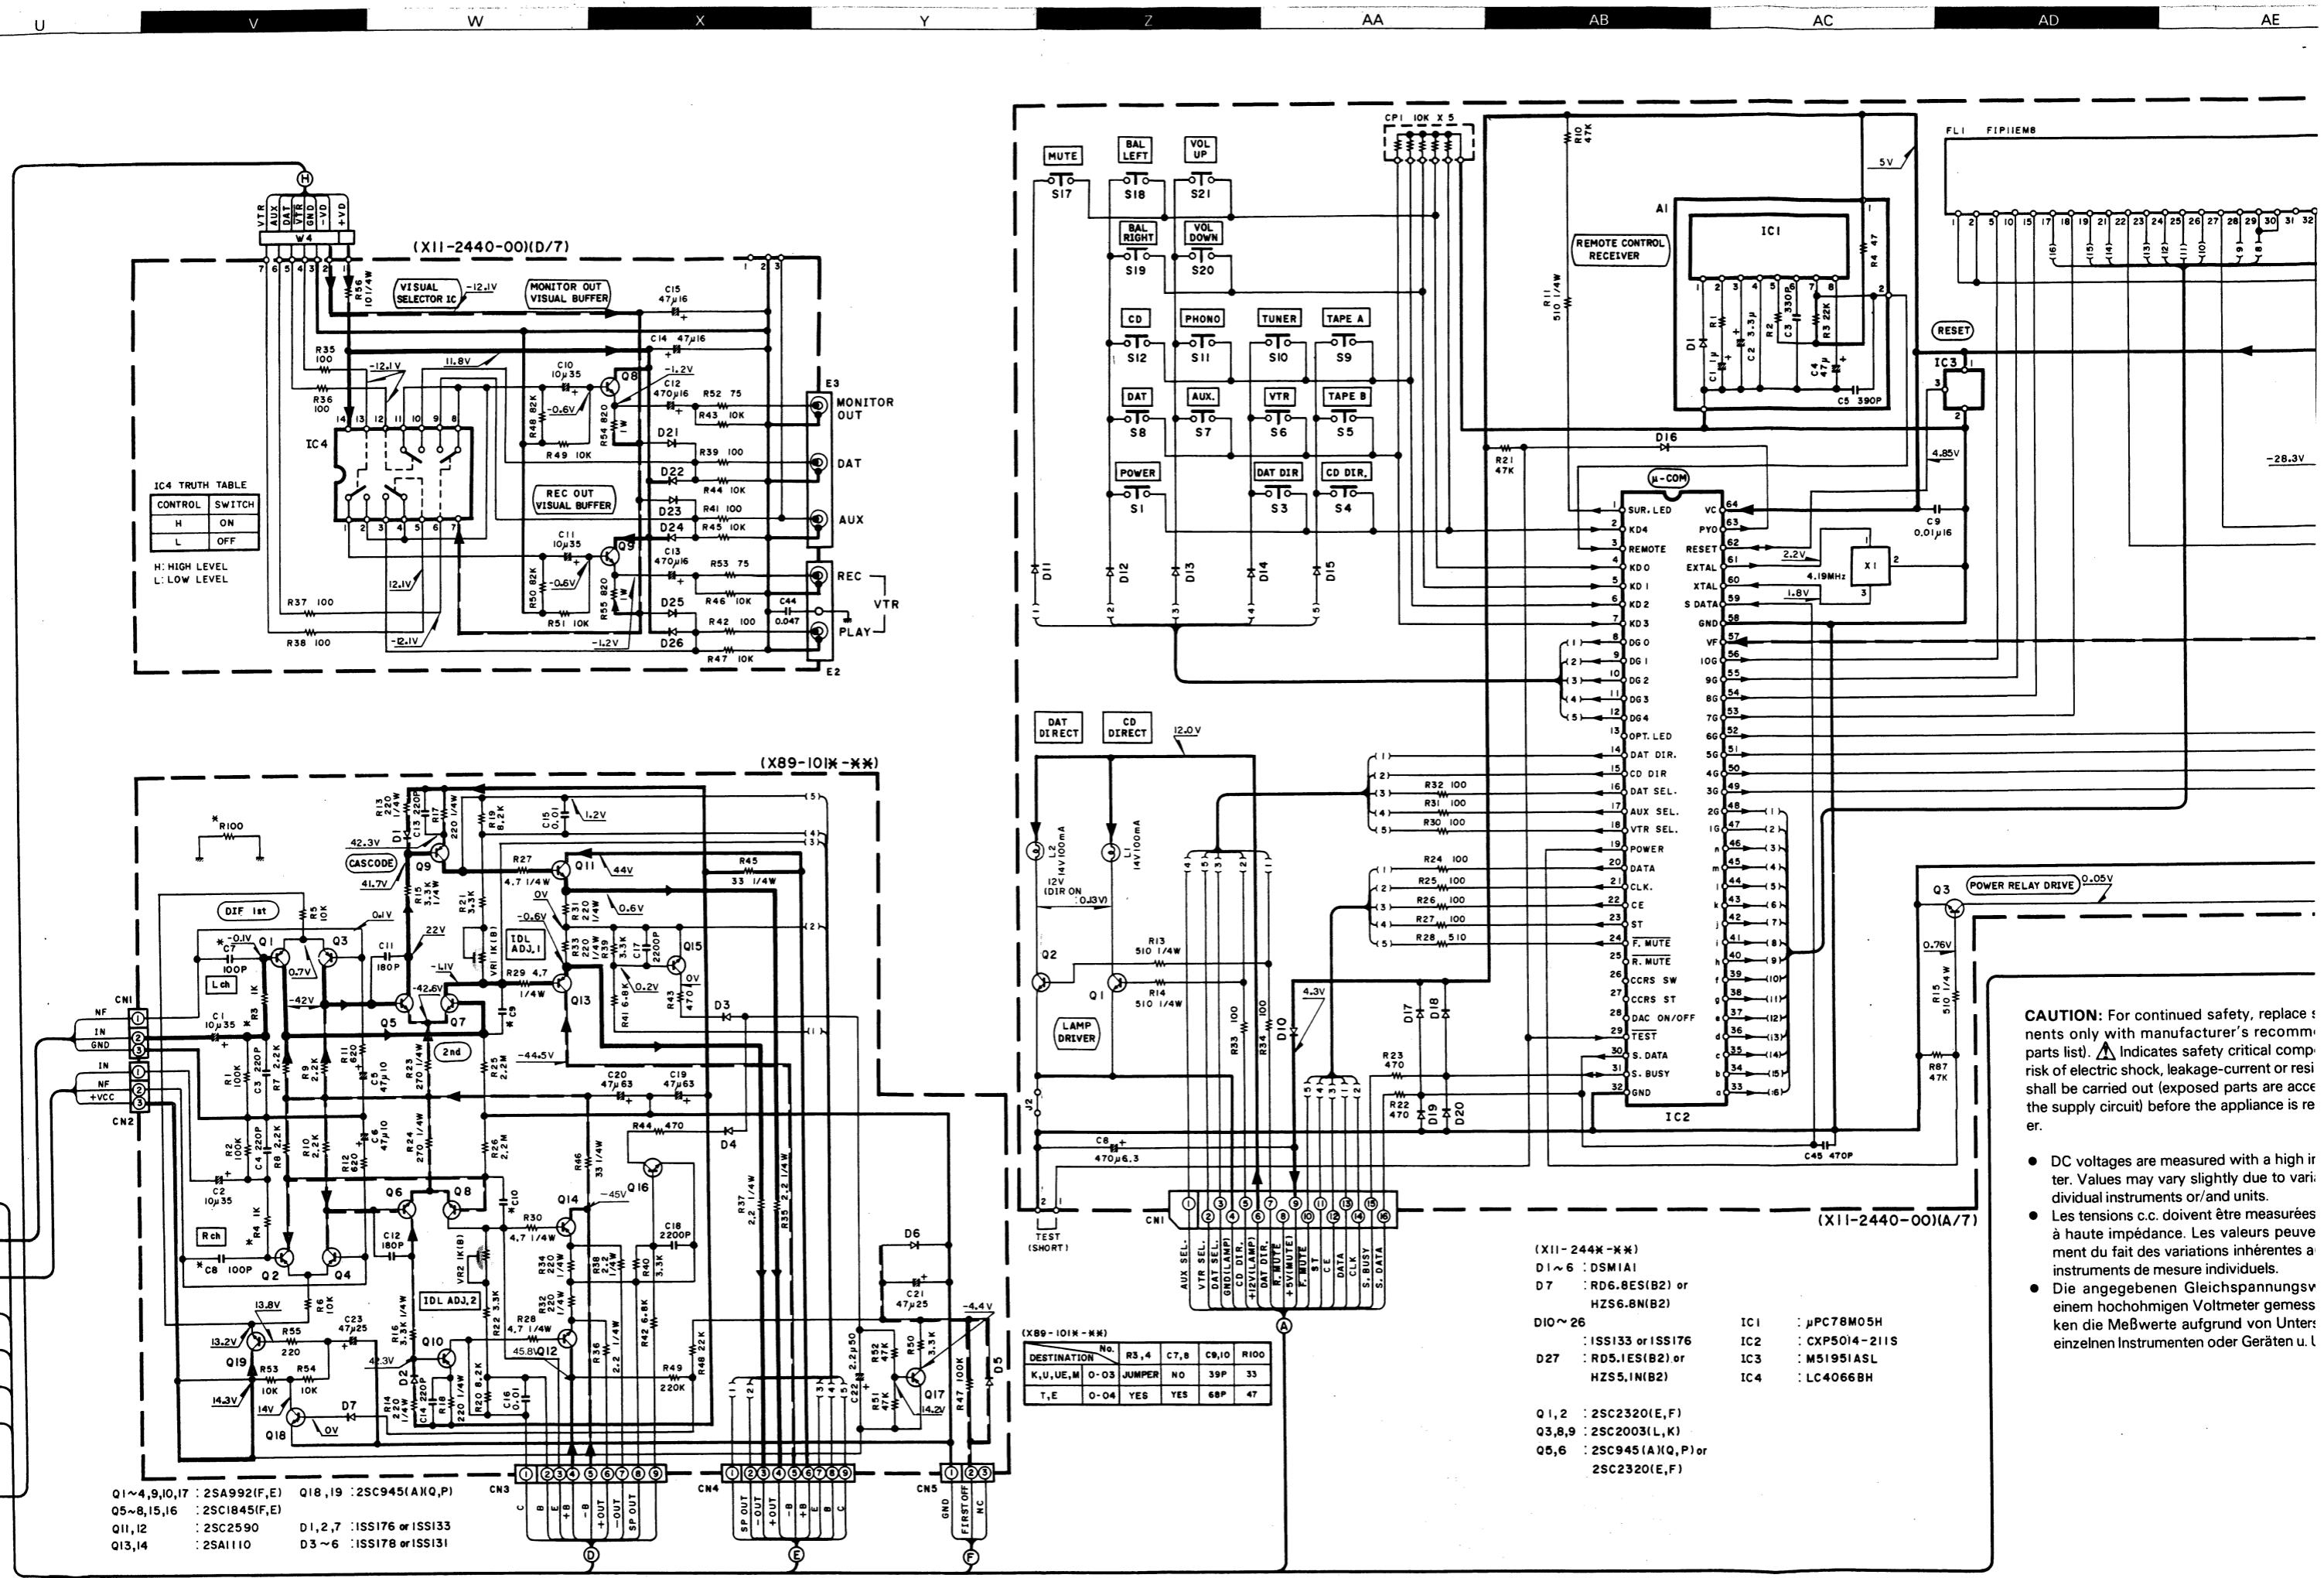

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

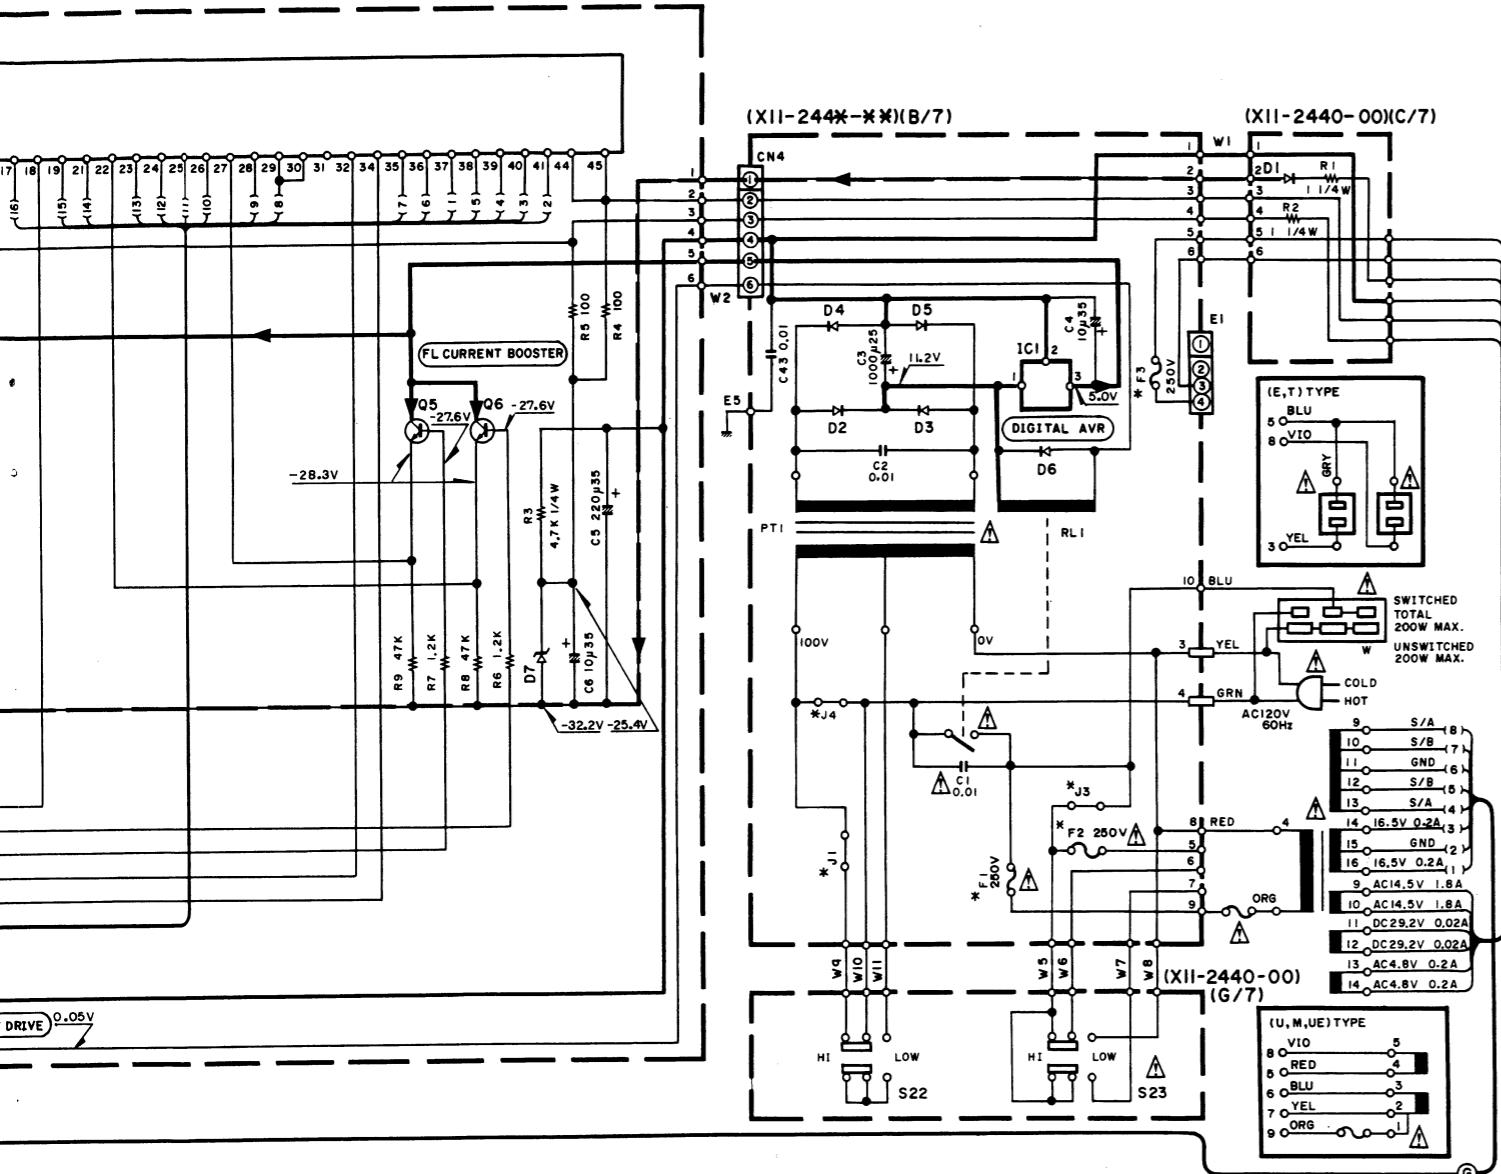

- DC voltages are measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.
- Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance. Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels.
- Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Voltmeter gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig.

SPECIFICATIONS

Power Output

65 watts per channel minimum RMS, both channels driven, at 8 ohms from 20 Hz to 20,000 Hz with no more than 0.09% total harmonic distortion.

Maximum continuous output power (IEC) from 60 Hz to 12,500 Hz, 0.7% THD at 8 ohms	81 W + 81 W
Total Harmonic Distortion (20 Hz to 20,000 Hz 8 ohms)/	
At rated output	0.09%
At 1/2 rated output	0.04%
Intermodulation distortion (60 Hz: 7 kHz = 4:1)	0.02% at rated output into 8 ohms
Signal-to-Noise ratio (IHF-A)	
PHONO MM (2.5 mV)	75 dB
TUNER, AUX, TAPE PLAY	98 dB
MIC	67 dB
Signal-to-Noise ratio at unweighted, 50 mW output (DIN)	
PHONO (MM)	55 dB
TUNER, AUX, TAPE PLAY	56 dB
Tone Control	
Bass	± 10 dB at 100 Hz
Treble	± 10 dB at 10 kHz
Damping Factor	53 at 50 Hz
Channel Separation (DIN) at 1,000 Hz	
PHONO (Terminated with 2.2 kΩ)	60 dB
AUX (Terminated with 47 kΩ + 250 pF)	50 dB
Input sensitivity/impedance	
PHONO MM	2.5 mV/47 kohms
TUNER, AUX., TAPE PLAY	150 mV/47 kohms
MIC	1.3 mV/47 kohms
General	
Power consumption	2.5 A (U.S.A. models) 170 W (Other country models)
Dimensions	W: 340 mm (13-3/8") H: 119 mm (4-11/16") D: 363 mm (14-5/16")
Weight (Net)	7.9 kg (17.4 lb)

Remote control unit (RC-91)

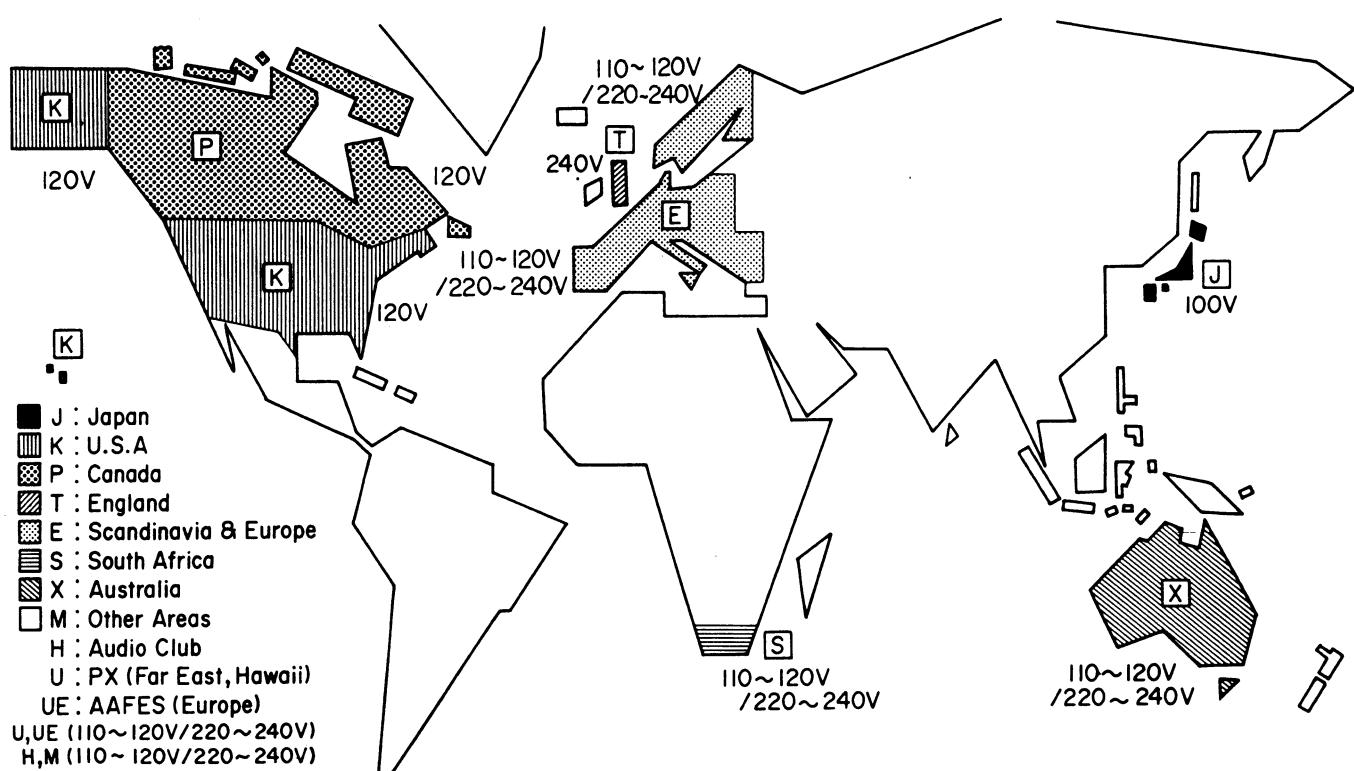

Maximum remote-controllable distance	6 m (on an axis of optical sensor)
Remote control system	Infrared control system
Battery for remote control unit	Size "AA" (R6) × 2

Kenwood follows a policy of continuous advancements in development.
For this reason specifications may be changed without notice.

Kenwood poursuit une politique de progrès constants en ce qui concerne le développement.
Pour cette raison, les spécifications sont sujettes à modifications sans préavis.

Kenwood strebt ständige Verbesserungen in der Entwicklung an.
Daher bleiben Änderungen der technischen Daten jederzeit vorbehalten.

WORLD MAP & AREA CODE

**Note:**

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the U.S. (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

KENWOOD CORPORATION

Shionogi Shibuya Building, 17-5, 2-chome Shibuya, Shibuya-ku, Tokyo 150, Japan

KENWOOD U.S.A. CORPORATION

2201 East Dominguez Street, Long Beach, CA 90810;
550 Clark Drive, Mount Olive, NJ 07828, U.S.A.

KENWOOD ELECTRONICS CANADA INC.

P.O. Box 1075 959 Gana Court, Mississauga, Ontario, Canada L4T 4C2

KENWOOD ELECTRONICS BENELUX N.V.

Mechelsesteenweg 418 B-1930 Zaventem, Belgium

KENWOOD ELECTRONICS DEUTSCHLAND GMBH

Rembrucker-Str. 15, 6056 Heusenstamm, West Germany

TRIO-KENWOOD FRANCE S.A.

Hi-Fi-VIDEO-CAR Hi-Fi

13, Boulevard Ney, 75018 Paris, France

TRIO-KENWOOD U.K. LTD.
